

PRANESH V

PROFILE

Motivated and versatile **IT undergraduate** (final year) with hands-on experience in full-stack development, embedded systems, and intelligent application design. Proven ability to lead and deliver end-to-end software solutions. Adept at translating complex problem statements into scalable, user-centric products.

EDUCATION

B.Tech in IT

V.S.B Engineering College

Karur, Tamil Nadu

2023 – 2027

CGPA: 7.6

SKILLS

- Python, Java, JavaScript, C, SQL
- React.js, Node.js, Express.js
- HTML5, CSS3, REST APIs
- Git, GitHub, VS Code, Postman
- Linux, Arduino IDE
- OpenCV, Deep Learning, RAG
- Communication & Leadership

CERTIFICATIONS

- NPTEL – Java Programming
- NPTEL – Big Data Analysis
- Data Science for Beginners

INTERNSHIP EXPERIENCE

FULL STACK DEVELOPMENT INTERN at *Software Development Company (Remote, India)*.

- ◇ Developed and deployed web application modules using modern frontend and backend technologies across the complete software development life-cycle.
- ◇ Collaborated with cross-functional teams to design RESTful APIs, integrate third-party services, and ensure responsive UI/UX across devices.
- ◇ Contributed to code reviews, documentation, and iterative feature development following Agile methodologies.

PROJECTS

HAWK AI – Deep Learning, Computer Vision, Python, OpenCV

- ◇ Designed an automated attendance management system powered by deep learning and facial recognition using existing smart board cameras – zero additional hardware required.
- ◇ Implemented real-time face detection pipeline using CNNs, achieving high accuracy under varied lighting conditions. Generated automated attendance reports integrated with institutional databases.

PROJECT SHIELD – ESP32, ML, LoRa, GSM, Cloud

- ◇ Led end-to-end development of an intelligent disaster management platform for detecting low-tension electrical line failures using ESP32 IoT sensors and ML-based anomaly detection.
- ◇ Built cloud-hosted real-time dashboard with automated GSM and LoRa alert dispatching and remote circuit isolation capabilities. Served as Lead Developer.

CLARIFAI – RAG, Vector Database, Endee, Python, LLM, Full Stack

- ◇ Built a production-ready intelligent RAG platform designed as an AI assistant for events and hackathons, enabling hallucination-free information retrieval with full source attribution.
- ◇ Leveraged Endee vector database to semantically search event documents; architected full-stack interfaces for coordinators and participants.

INVESTIGATOR – React, Node.js, Live Market APIs, AI, Chart.js

- ◇ Developed a comprehensive investment monitoring and simulation platform enabling multi-asset portfolio tracking and real-time market analysis via interactive dashboards.
- ◇ Built an AI-powered investment mentor providing contextual insights, portfolio rebalancing suggestions, and risk assessments.

HOUSE – React, Node.js, WebSockets, Judgeo API

- ◇ Built a Harry Potter-themed online competitive coding platform with house-based team selection, real-time multi-language code execution, live contest leaderboards, and immersive animated UI.

ACHIEVEMENTS & PATENTS

PATENT FILED (2025): Hawk AI – Automated Attendance System.

- ◇ Indian patent for a deep learning-based attendance management solution using smart board cameras for real-time facial recognition.

PATENT FILED (2024): Space Debris Management System.

- ◇ Indian patent for a computational model leveraging orbital tracking algorithms and predictive analytics to identify, catalogue, and mitigate space debris risks.
